1. Introduction & Key Concepts

RightServe FMCG Suite (Mobile Edition) is a complete, offline-first business management app for FMCG distributors, wholesalers and retailers. It runs entirely on your phone or tablet — every invoice, item, party and report lives in a local SQLite database on the device. No internet connection is ever required for daily operations.

What you can do with the app

- Create GST-compliant Sales & Purchase invoices, Quotations, Credit and Debit notes
- Track inventory with multi-level packaging units (Pcs → Pack → Box → Carton), batches, expiry dates and serial numbers
- Manage customers & suppliers with running outstanding balances
- Record receipts & payments and link them to invoices
- Generate E-Way bill JSON for the GST portal
- Produce reports: Sales/Purchase registers, GSTR-1, HSN summary, Outstanding, FY statements and traceability
- Print or share professional PDF bills on WhatsApp with your logo, signature, stamp and payment QR
- Run multiple businesses (firms) side by side, each with its own branding and bill numbering

Offline-first: what it means

- All data is stored on the device — the app works in airplane mode.
- Printing/PDF sharing uses the phone's native features; WhatsApp sharing opens WhatsApp with a ready message.
- Notifications (low stock, expiry, payment due) are computed from your own data on the device.
- Use the built-in JSON backup regularly and keep a copy off the phone — see Section 15.

2. Getting Started — First Launch & Login

- 1 Install and open the app. On the very first launch, the local database is created automatically.
- 2 If no business exists yet, the Business Setup screen appears — enter your firm name, GSTIN, address and state, or tap the demo-data option to explore with sample data.
- 3 Log in with your username and password.

Field	Default value
Username	admin
Password	admin123

■ **NOTE:** Change the admin password after first login (Hub & More → User Operators & Access). The password and its security question are stored only on the device.

■ **TIP:** Forgot the password? Use the security-question reset — it works fully offline.

3. The Dashboard

The Dashboard is your daily control room. Pull down to refresh at any time.

- Quick actions: + New Sale, + Purchase, + Payment — one tap to the most common tasks.
- Stat cards: Today's Sales, Month Sales, Receivables, Payables, Month Purchase and Stock Value. Tap any card to open the underlying list.
- 7-Day Sales Trend chart.
- Low Stock and Expiring Soon panels linking to the item list and batch registry.
- Bell icon (top right): opens the offline Notification Centre — see Section 12.

4. Billing — Sales, Purchases, Quotations & Notes

Creating a Sale (or Purchase)

- 1 Go to the Billing tab → choose the voucher type tab → tap the + button, or use the Dashboard quick actions.
- 2 The Invoice No is generated automatically from your business prefix (editable).
- 3 Tap Invoice Date to pick the date from the calendar (Today shortcut included).
- 4 Select the Customer/Supplier — see “Party search & quick-add” below.
- 5 Choose the GST Tax Type (Auto / CGST+SGST / IGST) — see Section 5.
- 6 Tap + Add Product, pick an item, then set quantity, packaging unit, rate, discounts (Trade/Cash/Special), GST rate, batch and serials. Tap Apply Item.
- 7 Review Summary & Totals — taxable value, CGST/SGST or IGST breakdown, extra discount and grand total.
- 8 Enter Amount Paid Now (full, partial or zero) — the balance is tracked automatically on the party.
- 9 Optionally open Invoice Details for Ship To, dispatch and reference fields (Section 6).
- 10 Tap Save & Finalize. From the invoice screen you can Print, share a PDF, or send on WhatsApp.

Party search & quick-add (new customers on the spot)

- The party picker has a live search box — type a name, phone number or GSTIN to filter instantly.
- If the party is new, tap “+ Add New Customer / Supplier”. The name you searched is pre-filled; add phone, state, GSTIN and address, then Save & Select — the party is created and attached to the bill without leaving the screen.

Three-level discounts

Each line supports Trade, Cash and Special discounts (applied in sequence). Enable/disable in Feature Configuration.

Quotations, Credit & Debit notes

- Quotations don't affect stock; convert an accepted quotation to a Sale in one tap.
- Credit Notes (sales returns) and Debit Notes (purchase returns) reverse stock and adjust the party balance.

5. GST Tax Type & SEZ Billing (CGST/SGST vs IGST)

Every sale and purchase voucher has a GST Tax Type selector with three options:

Option	What it does
Auto (default)	Compares the customer's GST state with your company's GST state. Same state → CGST + SGST. Different state → IGST. The chip shows what Auto resolves to.
CGST + SGST	Forces the intra-state split regardless of states.
IGST	Forces inter-state tax even when both parties are in the same state.

When do I need the IGST override?

Supplies to SEZ units are inter-state supplies under GST — IGST applies even if the SEZ unit is in your own state. Example: a Nagpur distributor billing a company inside MIHAN SEZ, Nagpur must charge IGST although both are in Maharashtra. Select IGST on that voucher; everything downstream follows automatically:

- The printed bill shows an IGST row (no CGST/SGST) and the HSN tax summary follows suit.
- GSTR-1 portal JSON places the invoice in the inter-state section.
- GST reports and E-Way JSON use the same forced tax type.

■ *TIP: The Summary card shows the live CGST/SGST or IGST breakdown as you switch, with a "(forced)" marker when overridden.*

6. Invoice Details — Ship To, Dispatch, Order References & e-Invoice

Below the totals is a collapsible "Invoice Details" section (a "N filled" badge shows how many optional fields you've used). All fields are optional and print on the tax invoice.

Consignee (Ship To)

- Tick "Same as customer (Bill To) address" to ship to the buyer's own address — a preview appears and it is copied onto the bill automatically.
- Or untick it and enter a different Name, GSTIN, Address, State and Place of Supply for the delivery location.

Order & References

- Buyer's Order No. & Order Date (calendar)
- Reference No. & Date
- e-Way Bill No.
- Mode/Terms of Payment (e.g. 30 Days Credit)

Dispatch / Transport

- Delivery Note & Date
- Dispatch Doc No.
- Dispatched Through (transporter/courier)
- Destination
- Terms of Delivery

- No. of Packets

e-Invoice (IRN)

- IRN, Ack No. and Ack Date — enter after generating the e-invoice on the GST portal; they print on the bill.

■ *NOTE: Which groups appear here is controlled in Feature Configuration (Section 14).*

7. Inventory — Items, Packaging Levels, Batches & Serials

Adding an item

- 1 Inventory tab → + Add Item.
- 2 Enter name, SKU, category, HSN code, GST rate, MRP, purchase & sale price, and the low-stock alert level.
- 3 Optionally enable serial tracking for the item.

Packaging Levels (Multi-Units)

Sell in Pcs, Packs, Boxes or Cartons from a single stock pool. Tap “+ Add Level” and define each level's conversion factor and prices:

Level	Factor	Meaning
Pcs (base)	1	Base counting unit
Pack	10	1 Pack = 10 Pcs
Box	120	1 Box = 120 Pcs
Carton	2400	1 Carton = 2400 Pcs

On a bill you pick the unit; stock is always deducted in base units.

Batches & Expiry

- Every purchase creates/updates a batch (batch no, mfg & expiry dates via calendar, quantities, cost).
- Sales consume nearest-expiry batches first (FEFO) unless you pick a batch manually.
- Batch Stock screen shows expired and expiring-soon stock at a glance.

Serial Numbers & Traceability

- For serialised items, enter serial numbers at purchase and at sale (comma separated).
- Serial Lookup / Traceability answers: which supplier it came from, which batch, and which customer bought it.

8. Parties — Customers & Suppliers

- Parties tab lists customers and suppliers with live outstanding balances.
- Add/edit: name, phone, email, GSTIN (auto-detects state & PAN), address, state, opening balance.
- Party detail shows the ledger of invoices and payments, with quick actions: New Sale/Purchase, Receive/Pay money.
- WhatsApp reminder: send an outstanding-balance reminder to a customer in one tap.

9. Receipts & Payments

- 1 Hub & More → Receipts & Payments → + New Entry (or Dashboard → + Payment).
- 2 Choose direction: Money IN (receipt from customer) or Money OUT (payment to supplier).
- 3 Select the party, amount, mode (Cash / UPI / Bank / Cheque) and date (calendar).
- 4 Optionally link the entry to a specific unpaid invoice — its paid amount and status update automatically.

10. E-Way Transport Bills

- 1 Hub & More → E-Way Transport Bills → + New E-Way Bill.
- 2 Pick the sale invoice (details auto-fill), set document no/date, transporter details, vehicle number and distance.
- 3 Save and Export JSON — upload the file on the GST E-Way portal to generate the EWB number.
- 4 Enter the returned EWB number back on the voucher; it prints on the bill.

11. Reports & Exporting

Hub & More → GST & Financial Reports. Every report can be exported and shared (WhatsApp, email, Drive...).

Report	Contents	Export
Sales Register	All sale invoices with taxable/tax/total, date filtered	CSV
Purchase Register	All purchase vouchers, date filtered	CSV
GST Returns & GSTR-1	B2B/B2CL/B2CS/CDNR breakdown for a period	GST-portal JSON
HSN Summary (Table 12)	HSN-wise qty, taxable, CGST/SGST/IGST	CSV
Outstanding & Aging	Receivables & payables per party	CSV (both lists)
FY Balance	Year sales, purchases, receipts, payouts, stock value, gross profit	CSV
Traceability	Serial/batch search results with full trail	CSV

Export All Reports (PDF Pack)

On the Reports home screen, tap “Export All Reports (PDF Pack)” — a single PDF containing the FY summary, complete sales & purchase registers with totals, receivables/payables lists and the HSN summary is generated and opened in the share sheet. Ideal for sending to your accountant at month-end.

■ *TIP: CSV files open directly in Excel/Google Sheets — currency and ■ symbols are preserved.*

12. Notifications (Offline Alert Centre)

Tap the bell on the Dashboard to open the Notification Centre. Alerts are generated on the device from your own data — no internet needed:

Badge	Alert	Tap to open
LOW STOCK	Item at or below its low-stock alert level	Item detail
EXPIRED	Batch past expiry with stock remaining	Batch registry
EXPIRING	Batch expiring within 30 days	Batch registry
PAYMENT DUE	Sale invoice unpaid/partial for over 7 days	The invoice

- Opening the list marks everything as read — the red dot on the bell disappears (and stays cleared after app restarts).
- The dot re-appears only when something NEW happens: a new alert, or an existing one changes (e.g. stock drops further).
- Pull down to refresh; “All caught up!” means nothing needs attention.

13. Business Settings — Branding, Bill Formats & Invoice Texts

Hub & More → Businesses → tap a firm (or + New Business). Everything here prints on your bills.

Business profile

- Name, GSTIN (auto-fills state & PAN), phone, email, address, state
- Invoice prefix & starting bill number
- FSSAI licence number

Bill Branding Images

Image	Where it prints
Company Logo	Top of the bill header
Signature	Above “Authorised Signatory” at the bottom
Stamp / Seal	Bottom-left of the bill
Payment QR	“Scan to Pay” box next to bank details

Tap a tile to upload a PNG/JPG (keep each under 1.5 MB). Images are stored inside the offline database and included in backups.

Bank & payment details

- Bank name, account number, IFSC, branch, account holder and UPI ID — printed in the payment box on every bill.

Bill format & live preview

- Choose from 7 layout templates (Classic, Vyapar, Marg, Miracle, Tally, Busy, Modern).
- Tap “Preview Selected Bill Format” to see a sample invoice rendered with your current (even unsaved) settings.

Invoice Texts — customise labels & wording

Text	Default
Invoice Title	TAX INVOICE
"Bill To" Label	Bill To (Buyer)
Authorised Signatory	Authorised Signatory
Terms Heading	Terms & Conditions
Declaration	We declare that this invoice shows the actual price...
Footer Note	Thank you for your business!

14. Feature Configuration

Hub & More → Feature Config & Toggles. Switch modules on/off to match how you work:

- Negative stock allowance, duplicate-serial alerts, auto round-off
- Serial tracking, multi-unit conversion, 3-level discounts
- Quotations and E-Way bill modules
- Bill detail groups: Consignee (Ship To), Dispatch/Transport, Order & References, No. of Packets, e-Invoice — hiding a group removes it from the invoice screen and keeps bills lean.

15. Backup, Restore & Data Import

Backup (recommended weekly)

- 1 Hub & More → Backup & Restore → Export Backup.
- 2 A JSON file containing ALL data (businesses, items, batches, serials, parties, invoices, payments, e-way bills, users) is created.
- 3 Share it to email/Drive/WhatsApp so a copy lives outside the phone.

Restore

- 1 On a new device (or after reinstalling), open Backup & Restore → Import/Restore and pick your backup JSON.
- 2 The database is replaced with the backup contents.

Data import

Use Data Import to bring in items and parties from CSV files exported from other software.

■ **NOTE:** The app is fully offline — if the phone is lost and there is no backup file, data cannot be recovered. Back up regularly!

16. Themes, Dark Mode & Multiple Businesses

- Top bar: tap the moon/sun to switch dark mode; tap the colour dot to pick from 8 colour palettes.
- Top bar business name: tap to switch between firms — bills, stock and reports are kept per business.
- Each business has its own logo, bill format, numbering and branding.

17. Frequently Asked Questions

Q. Does the app need internet?

A. No. Billing, inventory, reports and notifications are 100% offline. Internet is only used if you share files (WhatsApp/email) or print over a network printer.

Q. Why does my bill show IGST when the customer is in my state?

A. The voucher's GST Tax Type is set to IGST (used for SEZ units like MIHAN). Set it back to Auto for normal same-state billing.

Q. The bell has no dot but I have low stock — why?

A. You already read those alerts. The dot returns only when a new alert appears or an existing one changes.

Q. Can I edit an invoice after saving?

A. Delete the voucher (stock and payments are reversed) and re-create it, keeping the same invoice number.

Q. How do I start bill numbers from 101?

A. Business settings → "Starting Number" = 101. New sales continue from there.

Q. Where are my images (logo/QR) stored?

A. Inside the offline database, so they are included in every backup automatically.

Q. Can two phones share one database?

A. Not live. Use backup/restore to move data between devices; the newest backup wins.

18. Support & Contact

- In-app: Hub & More → Help & License Support.
